

# Building Reliable Wireless Broadband

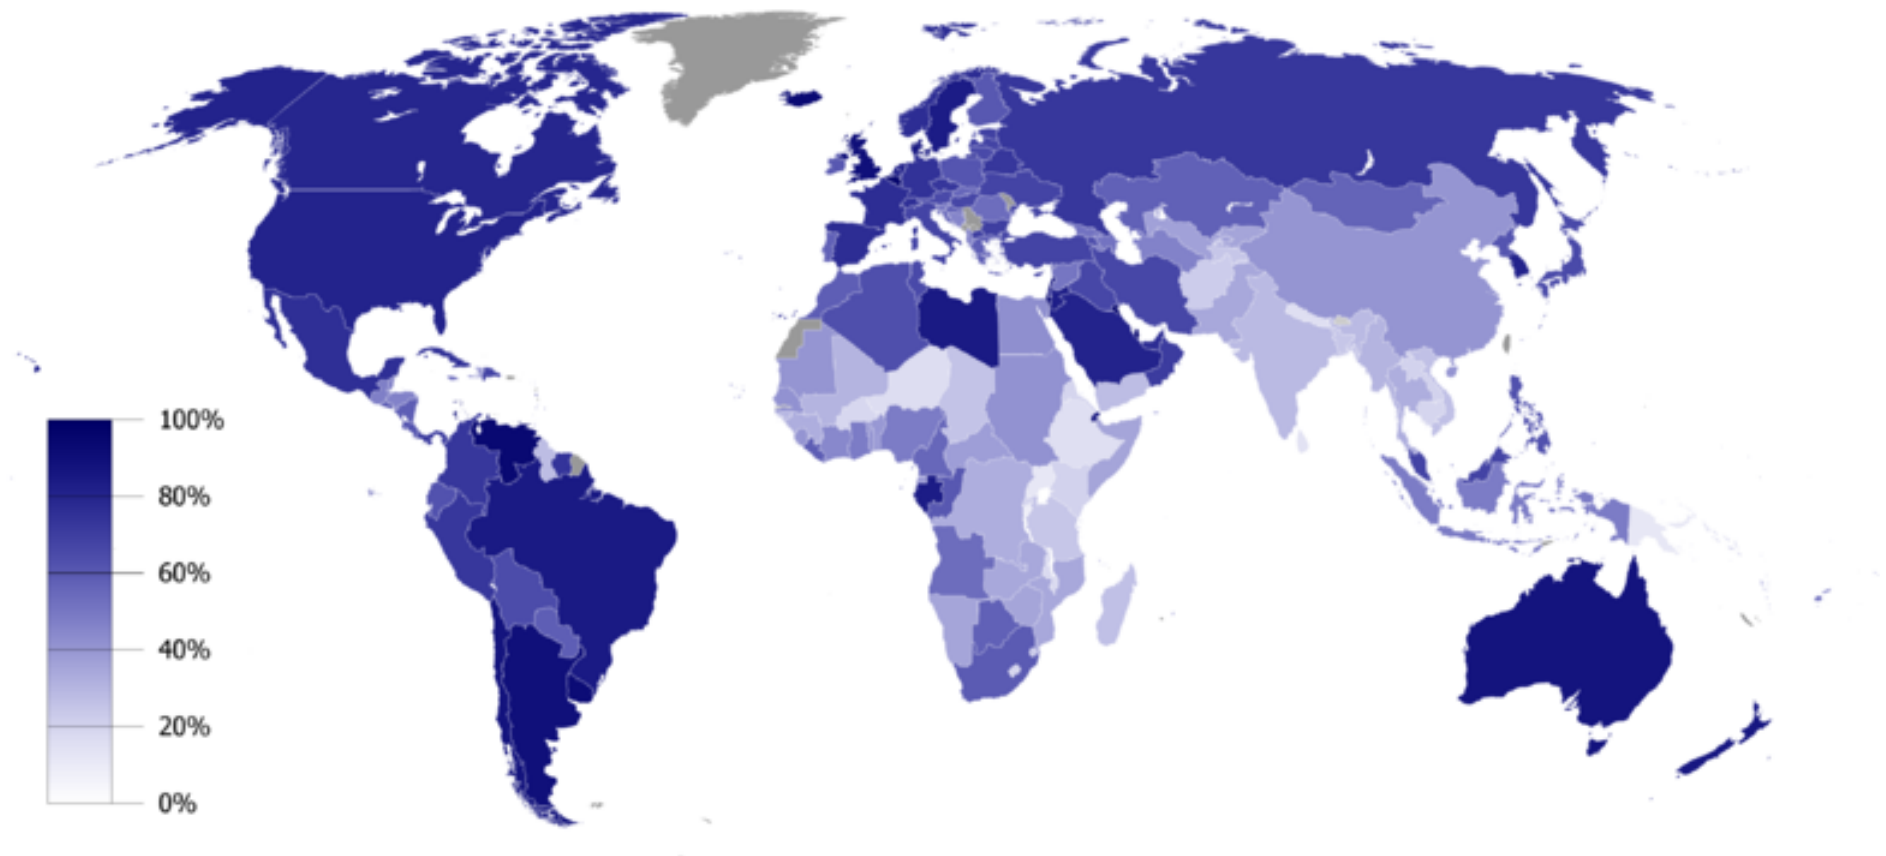

# In regard to...

- Fixed wireless access
- Not cellular
- Not nomadic access
- Low cost

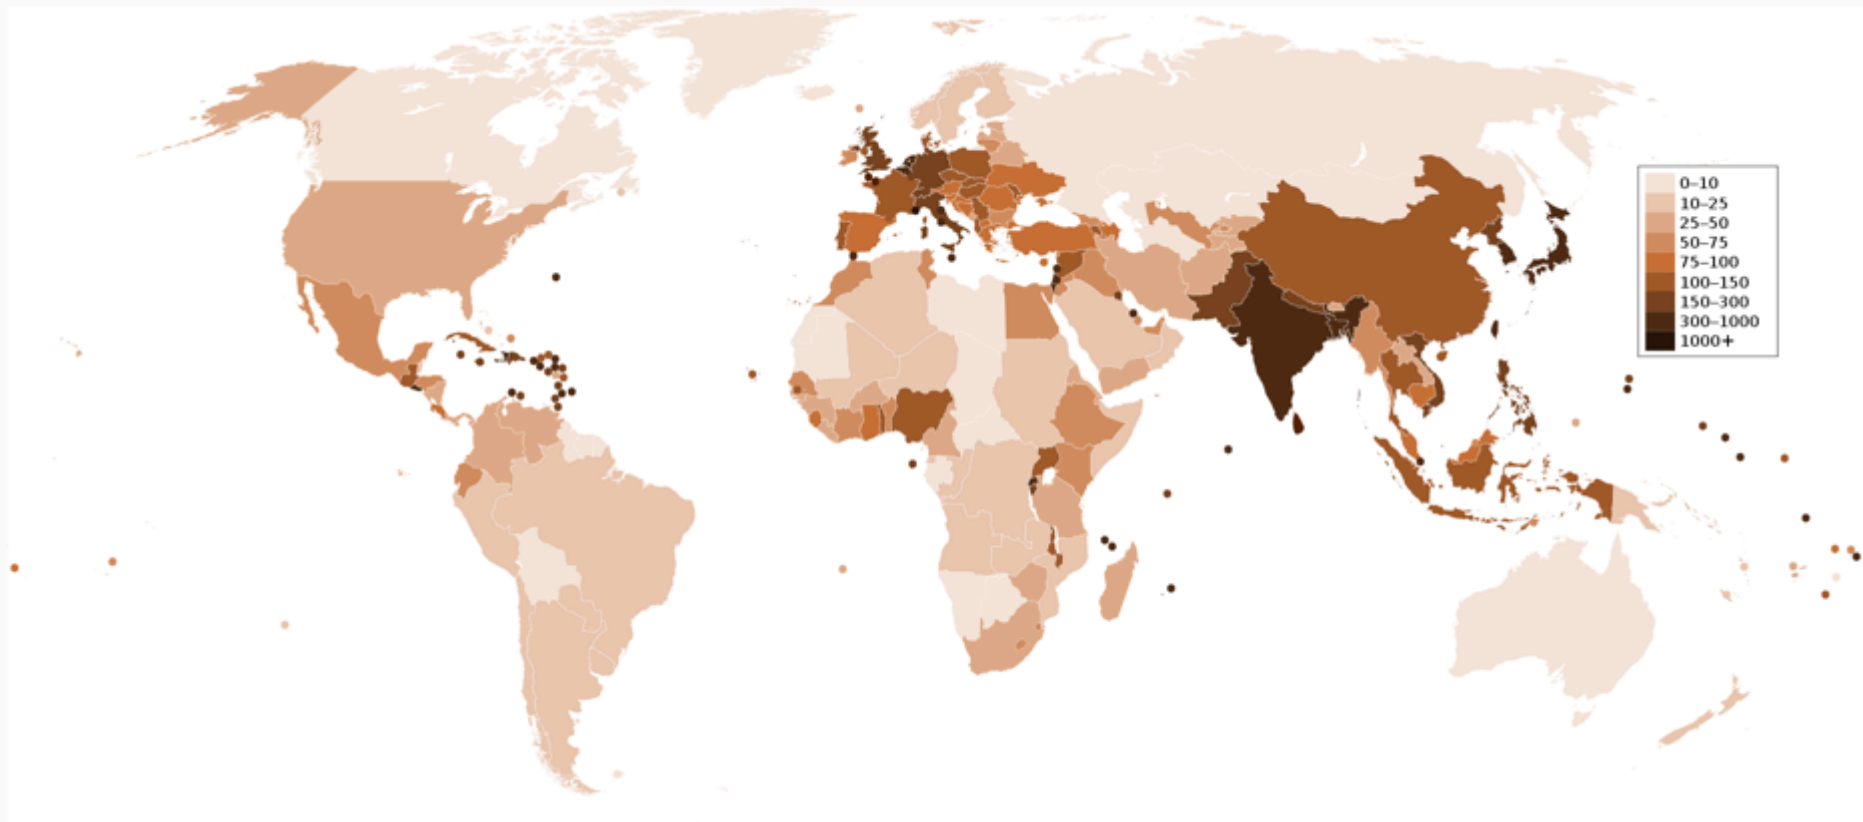

# THE MARKET

# New Zealand is Highly Urbanised

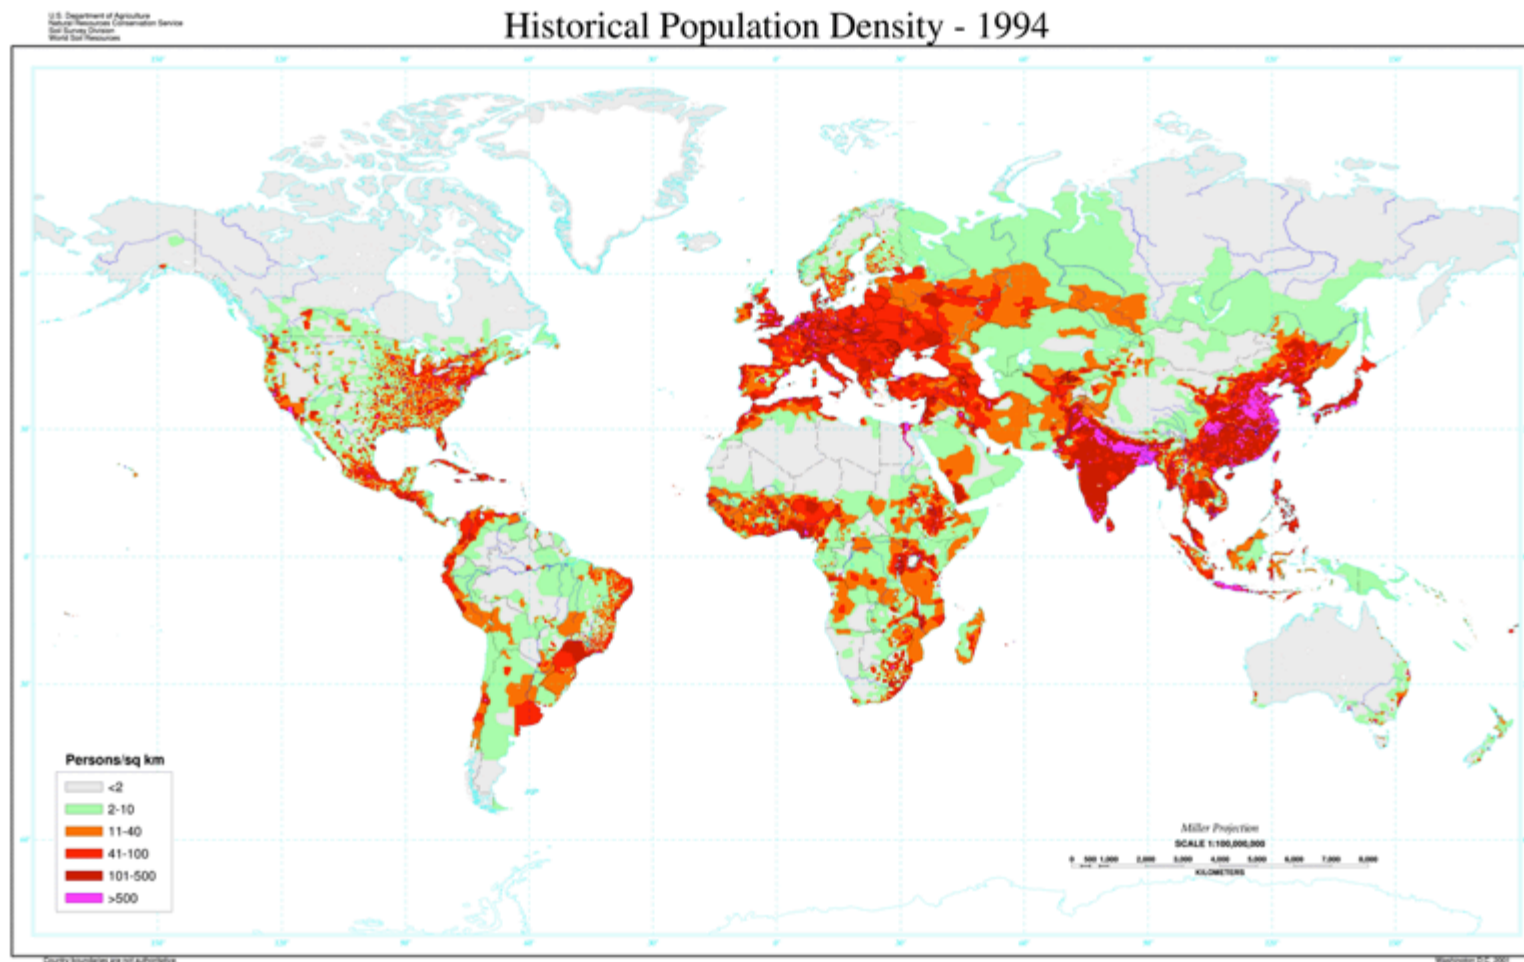

- One of the most urbanised countries in the world - 4<sup>th</sup> in the OECD

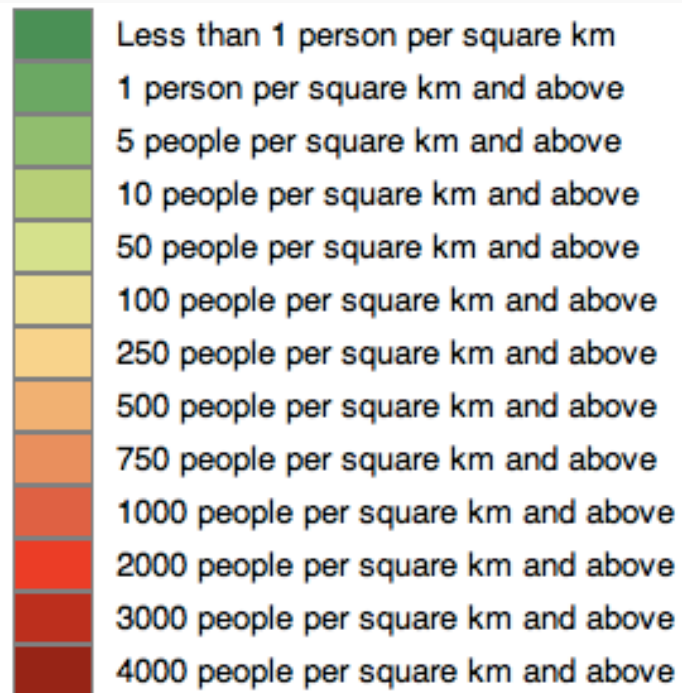

# Low Population Density

# Low Population Density

# Low Population Density

# Rural Areas Very Important to the Economy

	2009	2004
	\$(million)	
<b>Main export commodities</b>		
Milk powder, butter, and cheese	8,970	5,115
Meat and edible offal	5,526	4,479
Logs, wood, and wood articles	2,330	2,071
Crude oil	1,964	318
Mechanical machinery and equipment	1,842	1,470
Fruit	1,611	1,254
Fish, crustaceans, and molluscs	1,302	1,111
Aluminium and aluminium articles	1,102	1,008
<b>Total – all commodities</b>	<b>43,028</b>	<b>29,864</b>
<b>Main destinations</b>		
Australia	9,717	6,332
United States	4,808	4,297
Japan	3,373	3,283
China, People's Republic of	3,359	1,617
United Kingdom	1,757	1,449
<b>Total – all countries</b>	<b>43,028</b>	<b>29,864</b>

# NEW ZEALAND HAS A BIT OF WIRELESS

# RELIABILITY

# Wireless Can Be Very Reliable

The screenshot shows a window titled "Resources" with a "General" tab selected. The window displays various system metrics in a list format. The "Uptime" field is highlighted with a blue arrow pointing to the text "473d 02:51:11".

Field	Value
Uptime	473d 02:51:11
Free Memory	31.8 MiB
Total Memory	61.0 MiB
Model	
CPU	MIPS 4Kc V0.10
CPU Count	1
CPU Frequency	399 MHz
CPU Load	8 %
Free HDD Space	92.8 MB
Total HDD Size	126.9 MB
Sector Writes Since Reboot	107 135
Total Sector Writes	150 117
Bad Blocks	0
Architecture Name	mipsle
Board Name	RB500R5

473 Days Uptime

# It's All About Reliability

- Uptime
- Predictable performance
  - Bandwidth
  - Latency
  - Jitter

With reliability, applications work.

# And...real world example

- ThePacific.Net
- 45 sites
- Furthest site 6 hours from base
- No on staff “outdoor guy”
- Maintenance scheduled once a year

# Some Guidelines

- Environment - know it
- Structural and mechanical do not underestimate its importance
- Power - get it right
- Cables, connectors and earthing - its the little things.
- Standardise design
- Plan and plan some more
- Good RF decisions
- Maintain

All of these support Layer2+ networks, they enable the deployment of Internet

# ENVIRONMENT

## Environment

# Some Guidelines

- Environment - know it
- Structural and mechanical do not underestimate its importance
- Power - get it right
- Cables, connectors and earthing - its the little things.
- Standardise design
- Plan and plan some more
- Good RF decisions
- Maintain

All of these support Layer2+ networks, they enable the deployment of Internet

# STRUCTURAL

Structural

Structural

## Structural

Structural

Structural

# Some Guidelines

- Environment - know it
- Structural and mechanical do not underestimate its importance
- Power - get it right
- Cables, connectors and earthing - its the little things.
- Standardise design
- Plan and plan some more
- Good RF decisions
- Maintain

All of these support Layer2+ networks, they enable the deployment of Internet

# POWER

# Power

- Getting electricity
  - Mains
  - Solar
  - Wind?
- Storing electricity
  - Batteries - normally
- Using electricity

Power

# Some Guidelines

- Environment - know it
- Structural and mechanical do not underestimate its importance
- Power - get it right
- Cables, connectors and earthing - its the little things.
- Standardise design
- Plan and plan some more
- Good RF decisions
- Maintain

All of these support Layer2+ networks, they enable the deployment of Internet

# CABLES, CONNECTORS, EARTHING

- Drip loops
- Cable management
- Bulkhead N Connectors
- Earthing < 10 ohms
- Electronics earthed
- Cable earthing kits
- Quality cable and connectors

Cables,  
connectors,  
earthing

Cables,  
connectors,  
earthing

Cables,  
connectors,  
earthing

# STANDARDISE DESIGN

# Why Standardise?

- Fast deployment
- Maintenance is easy
- It's proven
- Decommissioned sites can be reused
- Parts can be held in stock
- Less mistakes in commissioning
- Trouble shooting is easy
- Great economies of scale
- Iterative improvements easy

GRAVELROAD

thinking beyond consulting

GRAVELROAD

thinking beyond consulting

# PLAN

# Never before have we had so many tools

- Google Earth
- Radio mobile
- Online tools
- Online information

There is never a substitute for a site visit.

# The Steps

1. Get approached by a community, or pick a community to meet our own needs
2. Plot out the best hill according to Google
3. Go site visit with our camera, take huge hi res photos and confirm that reality matches Google (it often doesn't due to 20m averaging of terrain)
4. Do politics with farmer over pole on land
5. Do local signups of at least 10 people
6. Build pole / base = 2 days work
7. Wait 1 week
8. Go back, fit out radios and test / commission (1 day)
- 9 wait 1 week for any out of box failures
10. Go back and hook up every customer and setup their computers / phones etc
