

IPv4/IPv6 Routing and Deployment Workshop

July 10-14, 2012, Karachi, Pakistan

In conjunction with

The SANDOG logo is displayed in white, bold, uppercase letters on a black rectangular background. The letters are stylized with a slight gap between the 'O' and 'D'.

APNIC

Presenter

- Champika Wijayatunga
 - Training Unit Manager, APNIC
 - champika@apnic.net
- GZ Kabir
 - Systems Integrator
 - gzkabir@bdcom.com
- Vivek Nigam
 - Internet Resource Analyst, APNIC
 - vivek@apnic.net

Agenda

- Internet Fundamentals
- Internet Resource Management
- IP addressing and IP routing basics
- Introduction to IPv6 and Protocol Architecture
- IPv6 Addressing and Sub-netting
- IPv6 Host Configuration
- IPv4/IPv6 Deployment Plan – Case Study
- IPv4/IPv6 Deployment in IGP – Case Study
- IPv4 to IPv6 Transition Technologies
- IPv4/IPv6 Deployment in EGP – Case Study
- IPv6 DNS

Case Study

Training ISP Network Topology

- Scenario:
 - Training ISP has 4 main operating area or region
 - Each region has 2 small POP
 - Each region will have one datacenter to host content
 - Regional network are inter-connected with multiple link

Training ISP Network Topology

Training ISP Topology Diagram

Training ISP Network Topology

- Regional Network:
 - Each regional network will have 3 routers
 - 1 Core & 2 Edge Routers
 - 2 Point of Presence (POP) for every region
 - POP will use a router to terminate customer network i.e Edge Router
 - Each POP is an aggregation point of ISP customer

Training ISP Network Topology

- Access Network:
 - Connection between customer network & Edge router
 - Usually 10 to 100 MBPS link
 - Separate routing policy from most of ISP
 - Training ISP will connect them on edge router with separate customer IP prefix

Training ISP Network Topology

- Transport Link:
 - Inter-connection between regional core router
 - Higher data transmission capacity than access link
 - Training ISP has 2 transport link for link redundancy
 - 2 Transport link i.e Purple link & Green link are connected to two carrier grade switch

Training ISP Network Topology

Training ISP Core IP Backbone

Training ISP Network Topology

- Design Consideration:
 - Each regional network should have address summarization capability for customer block and CS link WAN.
 - Prefix planning should have scalability option for next couple of years for both customer block and infrastructure
 - No Summarization require for infrastructure WAN and loopback address

Training ISP Network Topology

- Design Consideration:
 - All WAN link should be ICMP reachable for link monitoring purpose (At least from designated host)
 - Conservation will get high preference for IPv4 address planning and aggregation will get high preference for IPv6 address planning.

Training ISP Network Topology

- Design Consideration:
 - OSPF is running in ISP network to carry infrastructure IP prefix
 - Each region is a separate OSPF area
 - Transport core is in OSPF area 0
 - Customer will connect on either static or eBGP (Not OSPF)
 - iBGP will carry external prefix within ISP core IP network

Training ISP IPv6 Addressing Plan

- IPv6 address plan consideration:
 - Big IPv6 address space can cause very very large routing table size
 - Most transit service provider apply IPv6 aggregation prefix filter (i.e. anything other than /48 & \leq /32 prefix size
 - Prefix announcement need to send to Internet should be either /32 or /48 bit boundary

Training ISP IPv6 Addressing Plan

- IPv6 address plan consideration (RFC3177):
 - WAN link can be used on /64 bit boundary
 - End site/Customer sub allocation can be made between /48~ /64 bit boundary
 - APNIC Utilization/HD ratio will be calculated based on /56 end site assignment/sub-allocation

Training ISP IPv6 Addressing Plan

Training ISP IPV6 Addressing Plan
